

SEIIV4L Hybrid Video Generator Pipeline

Old Version + New Version + Red Car City Success Model

PHASE 1: INPUT + PLANNING

1

USER INPUT

Scene Prompt • Subject •
Vehicle/Object Details •
Environment/City •
Motion Request •
Video Settings

2

MASTER PROMPT LAYER

Main Scene • Subject •
Environment • Camera •
Motion • Negative
Constraints

3

SCENE PLANNING / STATE

Character Identity • Vehicle
Identity • Objects • City/
Background • Lighting •
Camera Framing •
Motion Intent

4

PERFORMANCE OPTIMIZER

Model Path • Resolution •
Frame Count • Sampling •
VRAM Strategy •
AWS GPU Selection

5

AWS GPU + COMFYUI

Cloud compute layer
hosting the workflow
engine

PHASE 2: IMAGE-FIRST ANCHOR STAGE

6

REFERENCE IMAGE BUILD

Load Image Model • Image
Positive / Negative •
CLIP Encode • KSampler •
VAE Decode

7

IMAGE QUALITY / SCENE QC

Full Subject Visible? •
Correct Vehicle? • Correct
City Background? •
Composition Correct? •
Cinematic Enough?

FAIL

8

IMAGE REGENERATION LOOP

Regenerate image until
scene anchor is approved

PASS

9

SCENE ANCHOR CAPTURE

Save Approved Image • Save Subject Identity •
Save Vehicle Appearance • Save City Composition •
Save Framing/Camera State

Success model: full red
car with city background
becomes the visual scene
anchor.

PHASE 3: VIDEO PREP + GENERATION

10

VIDEO PREP

Load Wan Model • Wan
Positive / Negative •
Wan CLIP Encode •
Reference Image Encode •
Image-to-Video Latent

11

CONTINUITY PRE-CHECK

Subject Preserved? •
Vehicle Preserved? • City
Preserved? • Motion
Consistent with Anchor?

12

VIDEO GENERATION

ModelSamplingSD3 •
KSampler • Latent Sequence •
VAE Decode •
Frame Sequence

13

VIDEO QUALITY CHECK

Identity Continuity • Vehicle
Continuity • Background
Continuity • Motion Realism •
Distortion Detection •
Temporal Consistency

FAIL

14

FAILURE CLASSIFIER

Identity Failure •
Motion Failure •
Scene/Composition Failure

PASS

15

RECOVERY ROUTING

Image/Video Regeneration •
Motion Adjustment •
Scene Inversion / Rebuild

PHASE 4: FINALIZATION

16

CONTINUITY UPDATE

Save Final Frame • Save
Subject State • Save Vehicle
State • Save Environment
State • Save Camera State

17

VIDEO ASSEMBLY

Interpolation • Upscaling •
Frame Cleanup • Audio
Sync (later) • FFmpeg
Final Encode

18

OUTPUT

MP4 • Thumbnail •
Final Key Frame •
Generation Metadata

4-Prompt Rule

#1

Image Positive

#2

Image Negative

#3

Wan Positive

#4

Wan Negative

All four are
derived from the
same master
scene intent.

Guiding Principle

Good image first → Anchor the scene → Generate video from the anchor →
Check continuity and quality → Repair only where needed.
